

# Frozen Fantasies Mix Instructions

1. Empty complete container of Mix (1/2 Gallon) into 5 gallon mix container.
2. Follow mix instructions on container for water and liquor(if desired) and pour into 5 gallon mix container.
3. Shake well and pour contents of 5 gallon mixing container into reservoir on top of machine ( make sure dispensing handle on front of machine is pointing to the left- closed). Turn Power Button to the auto setting. In about 7-10 minutes the machine will cycle off and the product will be frozen and ready to serve.

## Tips for Machine Operation

1. Do not move machine once it has been setup.
2. Use only heavy duty extension cord, Damage will occur if smaller than a 10 gauge extension cord.
3. When Add Mix light comes on, add another batch of drinks, if desired.
4. When Mix low light comes on, fill reservoir or turn machine to OFF. Machine *will not continue to freeze when both lights are flashing.*
5. Drawing to many drinks too fast causes them to become soupy. Wait five to ten minutes for the machine to recover.
6. When party is almost over, you may allow reservoir to become empty when both lights are flashing by switching machine to OFF(center switch position) and then flipping it to wash to pour each of the last remaining drinks.
7. Please empty contents of machine and turn switch to off when finished.

## Possible Problems

The Machine needs a dedicated 20amp circuit to operate correctly. If this is not met the machine will either trip the circuit breaker or trip the reset button on back of machine (red button, turn machine to off position, press reset button than turn back on).
