Frozen Drink Machine Operation

1. Set up machine on Level area.
2. Plug Machine into outlet.(Remember that you need a dedicated 20 amp 110 volt outlet.)
3. Follow instructions below for exact amounts of water/mix and alcohol to be used.
4. Pour mix/water and alcohol into Machine.
5. Machine has switch for main power, frozen or chilled drink and light switch.
6. Press switch to desired setting and machine will begin to prepare drink. (each bowl has separate switches to operate) (**Snowflake is for Slushed Drink, Arrow for Chilled Drink**)
7. Two hours preparation time with refills only 30 minutes.
8. When the mix is 40 % Full, this is when you want to refill. Never let machine run dry or you will be starting over on the mix preparation time.
9. Each side will produce 2 1/2 gallons of drink.
10. If margarita is too thick, switch button to upper position,(chilled) When it smoothes out, you can return it to the lower position.(Snowflake/Slushed position)
11. If you have mix in machine all weekend, at night press button to the chilled position. When ready to prepare a frozen drink switch lever to slushed position.
12. Upon return please rinse out machine with water and pull lever to drain bowls. Thanks
13. If you want your mix to freeze up faster, keep mix/water/alcohol in refrigerator prior to use.

Mix Instructions

1. For **Regular Margarita** - 2 Qt. Margarita Mix, 2 Gallons Water, 1.75 Liter Tequila. This will produce 3 Gallons of drink mix.(each side holds 3 gallons)
2. For **Strawberry Margarita** - 2 Qt. Strawberry Mix, 2 Gallons Water, 1.75 Liter Tequila /Rum if making a daiquiri
3. For **Pina Colada** 2 qts Mix (entire bottle) 2 Gallons Water, 1.75 Liter Rum

Possible Problems

1. When setting up machine, pour water in first to check and see that the bowl gaskets are seated correctly. This is checked before you receive your machine, however in transport it can become an issue. What you want to check when you set up your machine is that the clear bowl at the bottom(below the red pull levers) has two tabs that rest underneath the plastic stops.(**push back and down to seat bowl if needed**) This holds the bowl so it will not slide off. If you set up the machine and the bowl is not secure, eventually it will shoot off and the mix will go everywhere. At that point the machine will need to be shut off and inoperable. Please make sure the bowls are secure on both sides.
2. If machine stops working it's probably due to the circuit breaker being activated. Remember the the drink machine needs a dedicated 20 ampcircuit for it to operate correctly. (reset the breaker)

1 Liter = 1.057 Quarts
